

Matias Bacelar

Front-End Developer

Buenos Aires - La Plata | Portfolio @ matiasbacelar.com |   

About Me

Hi, I'm Matias, I'm a self-taught developer, I'm passionate about everything related to Javascript, I care about writing clean code and being up to date with the latest technologies, I'm looking for a full-time job as a software developer where I can improve my skills and contribute writing clean and scalable code.

Freelance Projects

Círculo de Oficiales SPB | [Website](#)

Spring 2021 | Bs As - La Plata

- Build a website for the SPB Circle of Officers using React, Html, CSS, and JS.
- Implement maps using Leaflet and React Leaflet, applied styles using Styled Components and micro interactions with Framer Motion.
- Implement form validation using React Hook Form and persisted the data using Firebase firestore platform database.

Technical Projects

Personal Portfolio | [Website](#), [Github](#)

Summer 2022 | Bs As - La Plata

- Build my personal portfolio website as a static application using Next JS.
- Implement page transitions and micro animations using Framer Motion and use styles components for styles.
- Create a Rest Api to store and consume the information of each project using Strapi CMS, deploy it to heroku and deploy the frontend to Vercel.

Code Snippets Editor | [Website](#), [Github](#)

Summer 2021 | Bs As - La Plata

- Build a React application for creating, editing, saving and downloading code snippets.
- I implemented an authentication system with Supabase, used the Github provider and file storage service from this platform as well as using Context Api for global state management and Local Storage.
- Build an online code editor using the Codemirror library and its React implementation.

Animations Website | [Website](#), [Github](#)

Summer 2021 | Bs As - La Plata

- Build an animations website using React , React Router V6 and Vite JS as my bundler.
- Implement page transitions, parallax effects, css animations, scroll animations and layout animations.
- Create a simplified Rest API using Node JS to store and consume information and consume this API using React Query.
